### DETAILED ACTION

1. Please note: the examiner of record has changed. However, the Technology Center (TC1600) and Art Unit (AU1639) remain the same.

#### *Status of the Claims*

2. The preliminary amendment received on June 5, 2008 canceled claims 1-93 and added new claims 94-113.

#### *Election/Restrictions*

3. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 94-97, drawn to a composition.

Group II, claim(s) 98-110, drawn to a method of identifying compounds via method steps (a) and (b).

Group III, claim(s) 111-113, drawn to method of identifying compounds via bacterial culture. Please note: claims 111-113 utilize the term *in vitro*. While cell culture of cells or tissues from a multicellular organism is considered *in vitro*, cell culture of bacterial cells (i.e. single cellular organisms) is considered *in vivo*. Applicants are requested to clarify the use of the term *in vitro*.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature is a composition comprising (a) a bacterial RlmA protein or rRNA binding fragment and (b) an rRNA.

The common technical feature of a composition comprising (a) a bacterial RlmA protein or rRNA binding fragment and (b) an rRNA is known in the art.

Specifically, Lebars et al. (published January 15, 2003, EMBO Journal 22(2): 183-192) teach a composition comprising a rRNA and a RlmA<sup>II</sup> (please refer to the abstract; pages 185-187).

4. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

For Group II:

- A. a single, specific species of when the candidate compound is added (see claims 100-101 for examples);
  - B. a single, specific species of detectable label (see claims 102-106 and 109 for examples); and
  - C. a single, specific species of detection (see claims 99, 107-108, and 110 for examples).
5. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

6. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

7. The claims are deemed to correspond to the species listed above in the following manner:

Species A, claims 100-101; species B, claims 102-106 and 109; and species C, claims 99, 107-108, and 110.

The following claim(s) are generic: claim 98.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the species have different structures and/or functions.

8. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

9. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
